

INSPOGRID AI

Business Plan, Go-to-Market Strategy
& Technical Architecture

Unified Multi-Source Inspiration Aggregator with Printable Contact-Sheet Mood Boards

Pull saved inspiration from Pinterest, Etsy, Instagram & more.
AI-powered semantic filtering. Export professional contact-sheet PDFs
optimized for 5x5, 8x10 frames and gallery walls.

1. EXECUTIVE SUMMARY

InspoGrid AI is a hybrid web application + browser extension that solves a painful friction point for millions of visual creators, interior designers, vision board enthusiasts, and Etsy sellers: turning scattered saved inspiration across Pinterest, Etsy, Instagram and similar platforms into clean, professional, print-ready contact-sheet mood boards.

Core Value Proposition: "From hours of manual curation across multiple platforms to a beautiful, labeled, high-resolution contact-sheet PDF optimized for framing — in minutes."

Key Differentiators:

- Multi-source aggregation: Authorized pull from Pinterest boards, Etsy favorites/saved shops, Instagram saves, and manual uploads.
- AI semantic filtering: Natural language queries like "neutral rustic kitchens with natural light for 8x10 frames".
- Print-optimized contact sheets: Precise grids (4x6, 5x5, 2x4 for 8x10, variable thumbnail sizes) with source metadata, labels, and high-res (300 DPI) PDF export.
- Hybrid architecture: Browser extension for one-click "Send to Mood Board", web app for organization and design, optional AI agent for automation.
- Strong product-market fit in a large and growing visual inspiration + printable decor market.

Target Market: Primary — women 25-44 and Gen Z doing vision boards, home decor, and manifestation. Secondary — interior designers, Etsy printable/POD sellers, photographers, and educators.

Business Model: Freemium SaaS. Free tier for basic use; Pro tier \$9–15/month or \$99/year for unlimited AI filtering, larger grids, high-res exports, and metadata. Team tier \$29/month.

Financial Outlook (Conservative): Year 1 revenue \$12,000 – \$35,000 with 150–400 paying users. Optimistic: \$50k–\$120k+ with strong Pinterest organic + influencer traction. Break-even possible within 4–7 months at low build cost.

2. MARKET OPPORTUNITY & ANALYSIS

2.1 Market Size & Trends

Pinterest remains the dominant visual discovery platform with **537–631 million monthly active users** globally in 2026, showing consistent double-digit growth. It has exceptionally high purchase intent (2.2x social average) and is heavily used for home decor, DIY, fashion, weddings, and goal-setting — the exact behaviors that drive mood board and vision board creation.

The global wall art and printable decor market is valued at approximately **\$61–71 billion in 2025/2026**, projected to reach \$99–145 billion by the early 2030s (CAGR 5–9%). The printable/digital wall art subset alone is estimated at \$12.5–13+ billion and growing rapidly with high margins (90–95% on Etsy digital products).

Why Now: Pinterest at peak scale; AI (LLMs + vision models) mature enough for semantic filtering on personal collections; hybrid digital-to-physical workflows popular; strong Etsy/printables economy; seasonal spikes every January for vision boards.

2.2 Target Customers & Pain Points

Primary Segment (Hobbyists / Personal Users):

- Women 25–44 and Gen Z (Pinterest core demographic)
- Use cases: New Year vision boards, home decor planning, manifestation, wedding/party planning
- Pain points: Thousands of saved pins scattered across platforms; manual curation is extremely time-consuming; basic search lacks semantic depth; difficult to turn inspiration into clean printable outputs for framing.

Secondary Segment (Professionals):

- Interior designers and home stagers (client mood boards)
- Etsy printable sellers and POD creators
- Photographers (contact-sheet style workflows)
- Educators, content creators, and small agencies

2.3 Competitive Landscape

The market has strong general tools but clear gaps in the exact combination needed: authorized multi-platform saved collection pulling + AI semantic filtering + specialized contact-sheet / custom frame grid PDF export.

Tool	Strengths	Weaknesses vs. InspoGrid	Pricing
Pinterest	Massive discovery, free collages	No deep saved management, no advanced AI filter, weak precise print grids	Free
Canva	Excellent templates, Magic Studio AI, easy PDF	Mostly manual import; weak deep saved-pin pulling; not optimized for contact-sheet grids	\$12–15/mo
Milanote	Clean visual mood boarding, web clipper	Limited multi-platform bulk pull; no strong semantic AI filter or contact-sheet focus	~\$10/mo
Morpholio Board	Strong for interior designers, iPad collaging	Apple-ecosystem focused; limited sourcing & not contact-sheet/PDF grid focused	~\$12/yr
Bulk Downloaders (Pin Toolbox etc.)	Excellent Pinterest ZIP/PDF export	No AI curation, no multi-source (Etsy etc.), basic grids only	\$15/mo or lifetime

Summary of Competitive Gaps: No dominant tool combines authorized multi-platform saved collection pulling + AI semantic filtering + specialized contact-sheet / custom frame grid PDF export. Pinterest and Canva are the biggest near-competitors but leave significant friction in curation and precise print output.

3. BUSINESS PLAN & FINANCIAL MODEL

3.1 Product & Value Proposition

InspoGrid AI turns fragmented personal inspiration into production-ready printable assets. Users connect their accounts or use the browser extension to bulk-import saved items, apply intelligent filters, arrange in professional contact-sheet layouts, and export high-resolution PDFs ready for printing and framing.

3.2 Pricing Strategy (Freemium SaaS)

Tier	Price	Key Features	Target User
Free	\$0	Limited imports (10-20/mo), basic 4x6 grids, watermarked PDFs	Trial / casual users
Pro	\$12/mo or \$99/yr	Unlimited imports, AI semantic filtering, custom grids (5x5, 8x10, variable), high-res export, metadata/labels, no watermark	Core paying users (hobbyists + pros)
Team / Designer	\$29/mo	Everything in Pro + collaboration, more sources, branding removal, priority support	Interior designers, small teams, agencies
Lifetime Lite (optional)	\$49–79 one-time	Limited version of Pro features (good for non-recurring appeal)	Price-sensitive users

Expected ARPU after mix: ~\$8–10/month.

3.3 Revenue Projections

Scenario	Year 1 Revenue	Paying Users (EOY)	Key Assumptions
Conservative (Most Likely)	\$12,000 – \$35,000	150 – 400	Strong organic Pinterest + 5-10 micro-influencers; 8-12% conversion
Optimistic (Strong Execution)	\$50,000 – \$120,000+	500 – 1,500+	Viral PDF sharing + paid ads + affiliate program; 12-18% conversion
Year 2 Potential	\$150,000 – \$400,000+ ARR	2,000 – 5,000+	Expanded sources, Canva/Printful integrations, team features

Break-even potential: 3–7 months post-launch with low build cost (solo developer leveraging existing skills). Many similar micro-SaaS tools in visual niches reach profitability quickly due to organic channels like Pinterest.

3.4 Cost Structure & Profitability

Build + Launch Costs (Low-End / Solo-Heavy): \$4,000 – \$18,000 total (MVP dev \$2-10k, design \$0.5-2k, AI/integrations \$0.5-2k, legal/compliance \$0.5-1.5k, hosting Year 1 \$0.3-1.2k).

Ongoing Monthly OpEx (at 500–2,000 users): \$800 – \$3,000 (hosting/API \$100-500, marketing \$500-2,000, support/updates \$200-500).

Gross Margins: 70–90% typical for SaaS once built. High scalability after initial development.

4. GO-TO-MARKET STRATEGY

4.1 Positioning & Messaging

Core Promise: "Turn hours of Pinterest/Etsy scrolling into minutes of smart curation and print-ready vision boards, mood boards, or gallery walls."

Position as the missing bridge between inspiration platforms and physical/print output — the tool that finally makes personal saved collections usable and beautiful.

4.2 Launch Phases (6–12 Months)

Phase 1: Pre-Launch (Months 1–3) — Build MVP (Pinterest + Etsy connectors + basic contact sheet PDF). Validate with 100–300 beta users via Reddit (r/visionboards, r/interiordesign, r/EtsySellers), Facebook groups, and ASA networks. Create landing page + demo videos.

Phase 2: Soft Launch (Months 4–6) — Release to waitlist + Chrome Web Store. Organic push on Pinterest (business account, demo pins, tutorials). Launch on Product Hunt and Indie Hackers. Goal: 1,000–5,000 signups, 5–12% paid conversion.

Phase 3: Full Launch & Growth (Months 7+) — Scale Pinterest + Instagram ads. Launch influencer/affiliate program (20–30% recurring commission). Content marketing (YouTube/TikTok tutorials). Explore Canva/Printful integrations.

4.3 Marketing Channels & Budget (Year 1)

- **Organic Pinterest (Highest ROI early):** Create business account. Post demo grids, before/after tutorials, templates. Optimize for keywords like "printable mood board", "vision board contact sheet", "8x10 frame grid". Free/very low cost.
- **Influencers & Affiliates:** Micro-influencers (5k–50k) in vision board, home decor, manifestation, Etsy seller niches. Budget \$1k–5k initial + free premium access + 25% recurring commission.
- **Paid Ads:** Pinterest Ads (very efficient for this audience, CPC often \$0.10–\$1.50). Start \$500–1k/mo. Supplement with Meta/Instagram.
- **Communities:** Reddit, Facebook groups, Etsy forums, manifestation Discords. Content marketing on YouTube/TikTok.
- **Total Year 1 Marketing Budget:** \$5,000 – \$20,000 (heavily weighted toward organic + influencers).

4.4 Influencer & Creator Outreach Strategy

Micro-influencers are highly effective in this visual, trust-based niche. Target creators posting about vision boards 2026, mood boards, printable wall art, home decor planning, and Etsy digital products.

Pitch Approach: Personalized DM + email. Compliment specific content. Explain value clearly. Offer: Free lifetime Pro access + 25% recurring affiliate commission + co-created content opportunity (e.g., "How I made my 2026 vision board in 15 minutes"). Start with 20–50 outreach; aim for 5–10 initial collaborations.

5. TECHNOLOGY STACK & ARCHITECTURE

(This section is structured to be immediately actionable for building with GROK assistance.)

5.1 High-Level Architecture

Recommended: Hybrid Web App + Browser Extension (with optional AI Agent layer)

- **Web App (Core):** User dashboard, project/mood board management, AI filtering interface, drag-and-drop editor, PDF export settings, account & billing.
- **Browser Extension:** One-click "Send to InspoGrid" buttons on Pinterest, Etsy, Instagram. Handles authorized bulk export of saved boards/collections. Manifest V3 compliant.
- **Backend Services:** Auth, storage, job queue for PDF generation, AI orchestration, connectors.
- **Optional AI Agent:** Playwright + LLM loop for deeper automation ("Pull my top 50 rustic kitchen saves and make a 6x8 contact sheet").

5.2 Recommended Tech Stack (2026)

Layer	Recommended Choice	Why / Notes
Frontend (Web App)	Next.js 14 (App Router) + Tailwind CSS + shadcn/ui or Radix	Fast dev, great DX, excellent for dashboards & editors. Easy Vercel deploy.
Backend / Auth / DB	Supabase (Postgres + Auth + Storage + Realtime) or Firebase	Fastest path to production. Row Level Security perfect for user data isolation.
Browser Extension	Manifest V3 + React (or vanilla TS) + Vite	Chrome Web Store + Firefox. Use content scripts + background service worker.
PDF / Contact Sheet Generation	jsPDF + pdf-lib (frontend) or Puppeteer/ReportLab (server)	Frontend for speed/simple grids. Server for complex multi-page labeled contact sheets at 300 DPI.
AI / Semantic Filtering	Grok API or Claude 3.5/Opus + local Ollama fallback	Natural language queries on image metadata + descriptions. Vision model for auto-tagging if needed.
Connectors / Scraping	Browser Extension (authorized) + Playwright (backend service, optional)	Prioritize user-authorized flows. Playwright for deeper automation in agent mode.
Hosting & Deployment	Vercel (frontend) + Supabase (backend) + Railway/Render (optional workers)	Zero-config deploys, excellent DX, generous free tiers.
Payments	Stripe (Checkout + Customer Portal + Subscriptions)	Industry standard. Easy to implement with Supabase + Stripe integration.

5.3 Data Models (Core Entities)

- **User:** id, email, plan (free/pro/team), stripe_customer_id, created_at
- **Project (Mood Board):** id, user_id, name, description, grid_settings (rows, cols, size, dpi, labels), created_at, updated_at
- **SourceConnection:** id, user_id, platform (pinterest/etsy/instagram), access_token (encrypted), board_ids, last_synced
- **ImageAsset:** id, user_id, project_id, source_url, local_path (if downloaded), title, description, tags (AI), platform, saved_at, selected (bool)
- **ExportJob:** id, project_id, status, pdf_url, settings, created_at, completed_at

5.4 Key User Flows & E2E Test Scenarios

High-Level Core User Journey (MVP → V1):

1. **Onboarding & Connector Setup** — User signs up → Installs Chrome extension → Connects Pinterest (via extension) and/or Etsy (OAuth) → Grants permissions.
2. **Import Saved Content** — One-click "Send to InspoGrid" from Pinterest board or Etsy favorites → Images + metadata flow into user's library or directly into a new Project.
3. **Project Creation & AI Curation** — Create Mood Board project → Apply semantic filter ("neutral minimalist kitchens for 8x10 frames") or manual multi-select → Deduplicate & tag with AI.
4. **Grid Layout & Editing** — Drag-and-drop editor → Choose preset (4x6 contact sheet, 5x5 square, 2x4 for 8x10 frames) or custom rows/cols → Adjust spacing, add labels/captions, reorder.
5. **Preview, Version & Export** — Live preview of contact sheet → Save version → Export high-res (300 DPI) PDF with source links, titles, and optional QR codes.

E2E Test Scenarios for Development & QA (Playwright / Cypress)

These 12 end-to-end scenarios cover the full pipeline. They are designed to be implemented in Playwright (recommended for cross-browser + extension testing) or Cypress. Use mocks for external platforms (Pinterest/Etsy) in CI to keep tests fast and reliable. Real-account tests can run in a dedicated staging environment.

UC-01: Basic Pinterest Import → 4x6 Grid PDF Export

Flow: Install extension → Connect test Pinterest account → Select a board with 20+ pins → Import into new project → Set 4x6 contact sheet layout → Export labeled PDF.

```
// playwright/tests/uc-01-pinterest-import.spec.ts
test('UC-01: Pinterest import to 4x6 contact sheet PDF', async ({ page, context }) => {
  await loginAsTestUser(page);
  await installAndActivateExtension(context);
  await page.goto('https://pinterest.com'); // or mock
  await triggerExtensionImport('My Kitchen Board', 24);
  await expect(page.locator('[data-testid=project-grid]')).toHaveCount(24);
  await selectGridPreset(page, 'contact-4x6');
  await addLabelsAndMetadata(page, { showSource: true, showTitle: true });
  const pdfPath = await exportPDF(page);
  await expectPDFToContain(pdfPath, { pages: 1, images: 24, hasLabels: true, dpi: 300 });
});
```

UC-02: Etsy Favorites Aggregation + Multi-Source Merge

Flow: Authorize Etsy OAuth → Pull 15 saved items → Combine with 10 Pinterest pins in one project → Deduplicate → Export contact sheet with platform badges.

```
// playwright/tests/uc-02-etsy-merge.spec.ts
test('UC-02: Merge Etsy + Pinterest into one labeled contact sheet', async ({ page }) => {
  await connectEtsyAccount(page);
  await importFromEtsy(page, { count: 15, source: 'favorites' });
  await importFromPinterest(page, { count: 10, board: 'Modern Farmhouse' });
  await runAIDeduplication(page);
  await expect(page.locator('.image-asset')).toHaveCount(23); // 25 - 2 duplicates
  await exportPDFWithBadges(page, ['etsy', 'pinterest']);
  await expectPDFToContainSourceBadges(pdfPath);
});
```

UC-03: AI Semantic Filtering on Large Mixed Library

Flow: Import 120 mixed pins → Natural language query: "neutral minimalist kitchens with natural light for 8x10 frames" → AI returns 18 relevant images → Auto-arrange into 3x6 grid → Export.

```
// playwright/tests/uc-03-ai-filter.spec.ts
test('UC-03: Semantic filter reduces 120 images to 18 relevant', async ({ page }) => {
  await seedLargeMixedLibrary(page, 120);
  await applySemanticFilter(page, 'neutral minimalist kitchens with natural light for 8x10 frames');
  await expect(page.locator('.filtered-image')).toHaveCount(18);
  await expect(page.locator('.ai-tag')).toContainText(['minimalist', 'neutral', 'kitchen']);
  await setCustomGrid(page, { rows: 3, cols: 6, frameSize: '8x10' });
  await expectExportButtonEnabled(page);
});
```

UC-04: Classic Photography Contact Sheet (Film-Strip Style)

Flow: Import 48 images from photography board → Choose "Classic Contact Sheet" template → Add film-strip borders, frame numbers, EXIF-style metadata → Export 300 DPI multi-page PDF.

```
// playwright/tests/uc-04-contact-sheet.spec.ts
test('UC-04: Classic film-strip contact sheet with metadata', async ({ page }) => {
  await importImages(page, 48);
  await selectTemplate(page, 'classic-contact-sheet');
  await enableFilmStripStyle(page);
  await addFrameNumbersAndMetadata(page);
  const pdf = await exportHighResPDF(page, { dpi: 300, pages: 2 });
  await expectPDFLayout(pdf, { thumbnailsPerPage: 24, hasBorders: true, hasNumbers: true });
});
```

UC-05: Vision Board / Manifestation Workflow (Personal Use)

Flow: New user creates "2027 Vision Board" → Pulls quotes + images from multiple boards → AI groups by category (Health, Career, Home) → 4x5 inspirational grid → Prints for wall.

```
// playwright/tests/uc-05-vision-board.spec.ts
test('UC-05: End-to-end vision board creation and print export', async ({ page }) => {
  await createNewProject(page, '2027 Vision Board');
  await bulkImportFromMultipleSources(page);
  await applyAICategorization(page);
  await arrangeInInspirationalGrid(page, { rows: 4, cols: 5, theme: 'manifestation' });
  await addAffirmationOverlays(page);
  await exportPrintReadyPDF(page);
  await expect(page.locator('.success-toast')).toContainText('PDF ready for printing');
});
```

UC-06: Interior Designer Client Mood Board (Team Tier)

Flow: Designer creates client project → Invites client (read-only) → Imports client-saved pins → Applies brand colors/filters → Exports branded PDF with cover page and notes.

```
// playwright/tests/uc-06-team-collaboration.spec.ts
test('UC-06: Team mood board with client collaboration and branding', async ({ page, context }) => {
  await loginAsDesigner(page);
  const projectId = await createClientProject(page, 'Smith Residence - Modern Organic');
  await inviteClient(page, projectId, 'client@smith.com', 'read-only');
  await clientAddsPinsViaExtension(context, projectId);
  await applyBrandKit(page, { logo: true, colors: ['#2C3E50', '#E8D5B7'] });
  await exportBrandedPDF(page, { includeCover: true, clientNotes: true });
});
```

UC-07: Gallery Wall Planner with Variable Frame Sizes

Flow: Select 12 images → Use variable thumbnail sizing to match real frame dimensions (mix of 8x10, 5x7, 11x14) → Preview wall layout with spacing guides → Export PDF + shopping list of frame sizes.

```
// playwright/tests/uc-07-gallery-wall.spec.ts
test('UC-07: Variable frame size gallery wall planner export', async ({ page }) => {
  await selectImagesForWall(page, 12);
  await enableVariableSizingMode(page);
  await assignFrameSizes(page, ['8x10', '5x7', '11x14', '8x10']);
  await previewWallLayout(page, { wallWidth: 120, spacing: 2 });
  const pdf = await exportGalleryWallPDF(page);
  await expectPDFToIncludeShoppingList(pdf, ['8x10 x4', '5x7 x3', '11x14 x2']);
});
```

UC-08: Bulk Re-Export & Version History

Flow: User has existing project → Adds 5 new images and removes 2 → Changes grid from 5x5 to 4x6 → Re-exports new version → Previous version remains accessible in history.

```
// playwright/tests/uc-08-version-history.spec.ts
test('UC-08: Edit project and re-export with version history', async ({ page }) => {
  const project = await loadExistingProject(page, 'Kitchen Renovation v1');
  await addImagesToProject(page, 5);
  await removeImages(page, 2);
  await changeGridPreset(page, 'contact-4x6');
  await saveNewVersion(page, 'v2 - Updated layout');
  await expectVersionHistory(page).toContain(['v1', 'v2']);
  await exportSpecificVersion(page, 'v2');
});
```

UC-09: Manual Upload Fallback (No Connectors)

Flow: New user skips connectors → Drag-and-drop 30 images from desktop → Manually adds titles/links → Builds full grid and exports PDF. (Critical for users wary of permissions.)

```
// playwright/tests/uc-09-manual-upload.spec.ts
test('UC-09: Full workflow via manual drag-and-drop upload', async ({ page }) => {
  await createNewProject(page);
  await dragAndDropImages(page, 'test-images/kitchen/*.jpg', 30);
  await bulkEditMetadata(page, { addTitles: true, addSourceLinks: true });
  await arrangeCustomGrid(page, { rows: 5, cols: 6 });
  await expect(page.locator('.thumbnail')).toHaveCount(30);
  await exportPDFAndVerify(page, { hasAllImages: true });
});
```

UC-10: AI Agent Mode – Natural Language Command

Flow: User types: "Create a rustic farmhouse kitchen mood board from my recent saves and make it 8x10 frame ready" → Agent pulls relevant images, filters, arranges, and delivers ready-to-download PDF.

```
// playwright/tests/uc-10-agent-mode.spec.ts
test('UC-10: Full agent pipeline from natural language prompt', async ({ page }) => {
  await openAgentChat(page);
  await sendAgentPrompt(page, 'Create a rustic farmhouse kitchen mood board from my recent saves and make it 8x10 frame ready');
  await expectAgentProgress(page, ['Analyzing recent saves', 'Filtering 47 images', 'Arranging 3x4 grid', 'Generating PDF']);
  await expect(page.locator('.download-pdf-btn')).toBeEnabled();
  const pdf = await downloadAgentOutput(page);
  await expectPDFTheme(pdf, 'rustic-farmhouse-kitchen');
});
```

UC-11: Cross-Platform Sharing + Future POD Prep

Flow: Export PDF → Generate shareable project link → One-click "Prepare for Printful/Etsy" → Optimized individual image exports + mock product mockups.

```
// playwright/tests/uc-11-sharing-pod.spec.ts
test('UC-11: Share project and prepare assets for Printful/Etsy', async ({ page }) => {
  await exportAndShareProject(page);
  const shareLink = await getShareableLink(page);
  await page.goto(shareLink); // public view
  await clickPrepareForPOD(page, 'Printful');
  await expect(page.locator('.pod-assets')).toHaveCount(12); // individual optimized files
  await downloadZipForPOD(page);
});
```

UC-12: Performance & Large Library Stress Test

Flow: User with 2,000+ saved images across sources → Opens large project → Applies complex filter + reorders 80 images → Exports multi-page high-res PDF under 30 seconds.

```
// playwright/tests/uc-12-performance.spec.ts
test('UC-12: Handles 2000+ image library with acceptable performance', async ({ page }) => {
  await seedLargeLibrary(page, 2000);
  const start = Date.now();
  await applyComplexFilterAndRearrange(page, 80);
  await exportHighResMultiPagePDF(page, { pages: 4 });
  const duration = Date.now() - start;
  expect(duration).toBeLessThan(30000); // < 30s target
  await expectNoMemoryLeaks(page);
});
```

Note for Devs: Start with UC-01, UC-09 (manual), and UC-03 (AI filter) for MVP validation. Use Playwright's ability to test Chrome extensions directly. Mock external APIs heavily in CI. Real connector tests should use dedicated test accounts with limited boards.

5.5 PDF / Contact Sheet Generation Approach

For production-quality contact sheets (film-strip aesthetic, thumbnails + source + title + notes), use server-side generation with Puppeteer (HTML-to-PDF) or ReportLab. Support multiple templates: classic contact sheet, clean minimal, labeled gallery wall planner. Target 300 DPI for print quality. Include QR codes or short links back to original pins where possible.

5.6 Security, Compliance & TOS Considerations

- Focus on **user-authorized** data flows (browser extension + OAuth where available). Never scrape public content without permission.
- Store only URLs + metadata initially; download images only on explicit export.
- Clear disclaimers: Personal use only. Respect platform TOS.
- Implement rate limiting and respectful scraping patterns if using Playwright.
- Privacy policy + Terms of Service required before launch.

5.7 Development Phases & MVP Scope

MVP (8–12 weeks solo): Next.js web app (auth + projects + basic grid editor) + Supabase backend + Chrome extension for Pinterest board export + basic jsPDF grid export. Manual upload fallback.

V1 (Post-MVP): Etsy connector + AI semantic filtering (Grok/Claude) + improved PDF templates + Stripe billing.

V2: Instagram connector + AI agent mode + collaboration + more export templates.

6. DEVELOPMENT ROADMAP & MILESTONES

Phase	Timeline	Key Deliverables	Success Metric
MVP Build	Weeks 1–10	Web app + Supabase + Pinterest extension + basic PDF export + landing page	Internal alpha working end-to-end
Beta & Validation	Weeks 11–14	100–300 beta users, feedback loops, bug fixes, core UX polish	NPS > 40, clear product-market signals
Soft Launch	Months 4–5	Public Chrome Web Store release, Product Hunt launch, first 1k signups	500–2,000 signups, 5–10% paid conversion
V1 + Growth	Months 6–9	Etsy connector, AI filtering, Stripe billing, influencer program live	Reach \$1k–3k MRR
Scale	Month 10+	Additional sources, team features, integrations (Canva/Printful)	\$5k+ MRR, sustainable growth

7. RISKS, LEGAL & NEXT STEPS

Key Risks & Mitigations:

- **Pinterest / Platform TOS & Scraping:** Mitigate by prioritizing user-authorized browser extension flows and clear personal-use positioning. Avoid aggressive public scraping.
- **Competition from Canva / Pinterest / Adobe:** Differentiate on multi-source depth + precise contact-sheet/print optimization + AI semantic filtering on personal saves.
- **Churn:** Keep under 8–10%/month with excellent UX, regular template updates, and responsive support.
- **Build Scope Creep:** Ruthlessly scope MVP to core connector + PDF export. Add AI and extra sources in V1.

Immediate Next Steps (Recommended):

1. Finalize name & branding (InspoGrid AI, MoodContact, PinContact, etc.).
2. Build landing page (Carrd or Framer) with waitlist to validate demand.
3. Start MVP development: Supabase project + Next.js skeleton + basic Chrome extension for Pinterest.
4. Recruit 20–50 beta testers from vision board / interior design communities.
5. Draft privacy policy + Terms of Service (use templates + legal review)

This document provides a complete, actionable foundation. The technology section is specifically structured so that GROK can begin building the MVP immediately upon request.

8. APPENDIX: SAMPLE INFLUENCER PITCH & AD COPY

Sample Influencer Outreach (DM/Email):

Subject: Loved your 2026 vision board setup — quick idea to save your followers hours

Hi [Name],

I really enjoyed your recent reel on building a 2026 vision board — the grid layout tips were spot on.

I'm building InspoGrid AI, a tool that lets people pull their saved pins from Pinterest + Etsy favorites, apply smart AI filters (e.g. "neutral rustic kitchens"), and instantly export beautiful labeled contact-sheet PDFs ready for printing 8x10 or 5x5 frames.

Would you be open to a quick 15-min call? I'd love to give you lifetime free Pro access + 25% recurring commission on any signups from your link, and we could even co-create a quick tutorial if it fits your style.

No pressure at all — just thought it might be genuinely useful for your audience.

Thanks!

Corey

Sample Pinterest Ad / Organic Pin Copy:

"Stop scrolling for hours. Start printing beautiful mood boards in minutes.

InspoGrid AI pulls your saved Pinterest + Etsy inspiration, lets you filter with AI, and exports professional contact-sheet PDFs optimized for framing.

Perfect for 2026 vision boards, gallery walls, client presentations, and printable wall art.

Free to start. Pro plans from \$12/mo."

— End of Document —

This business plan and technical architecture is ready for implementation. Contact GROK anytime to begin building the MVP, generate starter code, or refine any section.
